GLOBE Project

**PAID Undergraduate Research Internships
Available for Spring 2012** (may begin earlier)

The GLOBE project is seeking Junior and Senior students at UMBC who have skills with both GIS (GES 286 and above) and academic literature search and review (Google Scholar, Web of Knowledge). Students with demonstrable skills in these areas are highly encouraged to apply to join our funded scientific research team. Students will receive training in advanced research techniques and will be paid an hourly wage for flexible hours of work in the lab or using their own computer. The work will provide a strong background in basic academic research skills- an excellent preparation for graduate school. Academic credit and/or Shriver-certified research experience credit are also available.

GLOBE is a new four-year NSF-funded project led by a team of scientists at UMBC that aims to transform global thinking about local change using advanced spatial computation and social networking tools.

Project web site: <http://globe.umbc.edu>

To apply, please contact Erle Ellis by email (ece@umbc.edu) with evidence of GIS and literature search experience. Interviews will begin immediately for work beginning Spring 2012 or earlier.
